

18th Asian Colloquium in Nephrology

Best Practices in Kidney Care in Asia

19 – 21 July 2019

Incorporating: SOTANC - State-Of-The-Art Nephrology Course (Nursing)
Singapore Society of Nephrology Annual Scientific Meeting
Asia Renal Association - Asian Nephrology Conference

Ensuring access to ESKD care in the Asia Pacific: Are we doing enough?

Masaomi Nangaku
President of the APSN

A CALL TO ACTION ON KIDNEY DISEASE

2018
UNITED NATIONS HIGH-LEVEL
MEETING ON NCDs

850 MILLION
PEOPLE
WORLDWIDE
are now estimated to have some form of kidney disease³.

11TH
LEADING CAUSE OF
GLOBAL MORTALITY
Chronic kidney disease (CKD) causes an estimated 1.2 million deaths per year and is now the 6th fastest growing cause of death. An additional 1.2 million deaths are attributable to reduced kidney function (measured by the glomerular filtration rate (eGFR))⁴.

13 MILLION
PEOPLE
AFFECTED WORLDWIDE
Acute kidney injury (AKI), an important driver of CKD, affects over 13 million people worldwide and 85% of these cases are found in low and middle-income countries (LMICs)⁵.

2.6 MILLION
RECEIVED DIALYSIS OR
TRANSPLANTATION
WORLDWIDE
In 2010, 2.6 million people with end-stage kidney disease (ESKD) or "kidney failure" received dialysis or transplantation worldwide⁶, a number projected to increase to 5.4 million by 2030⁷.

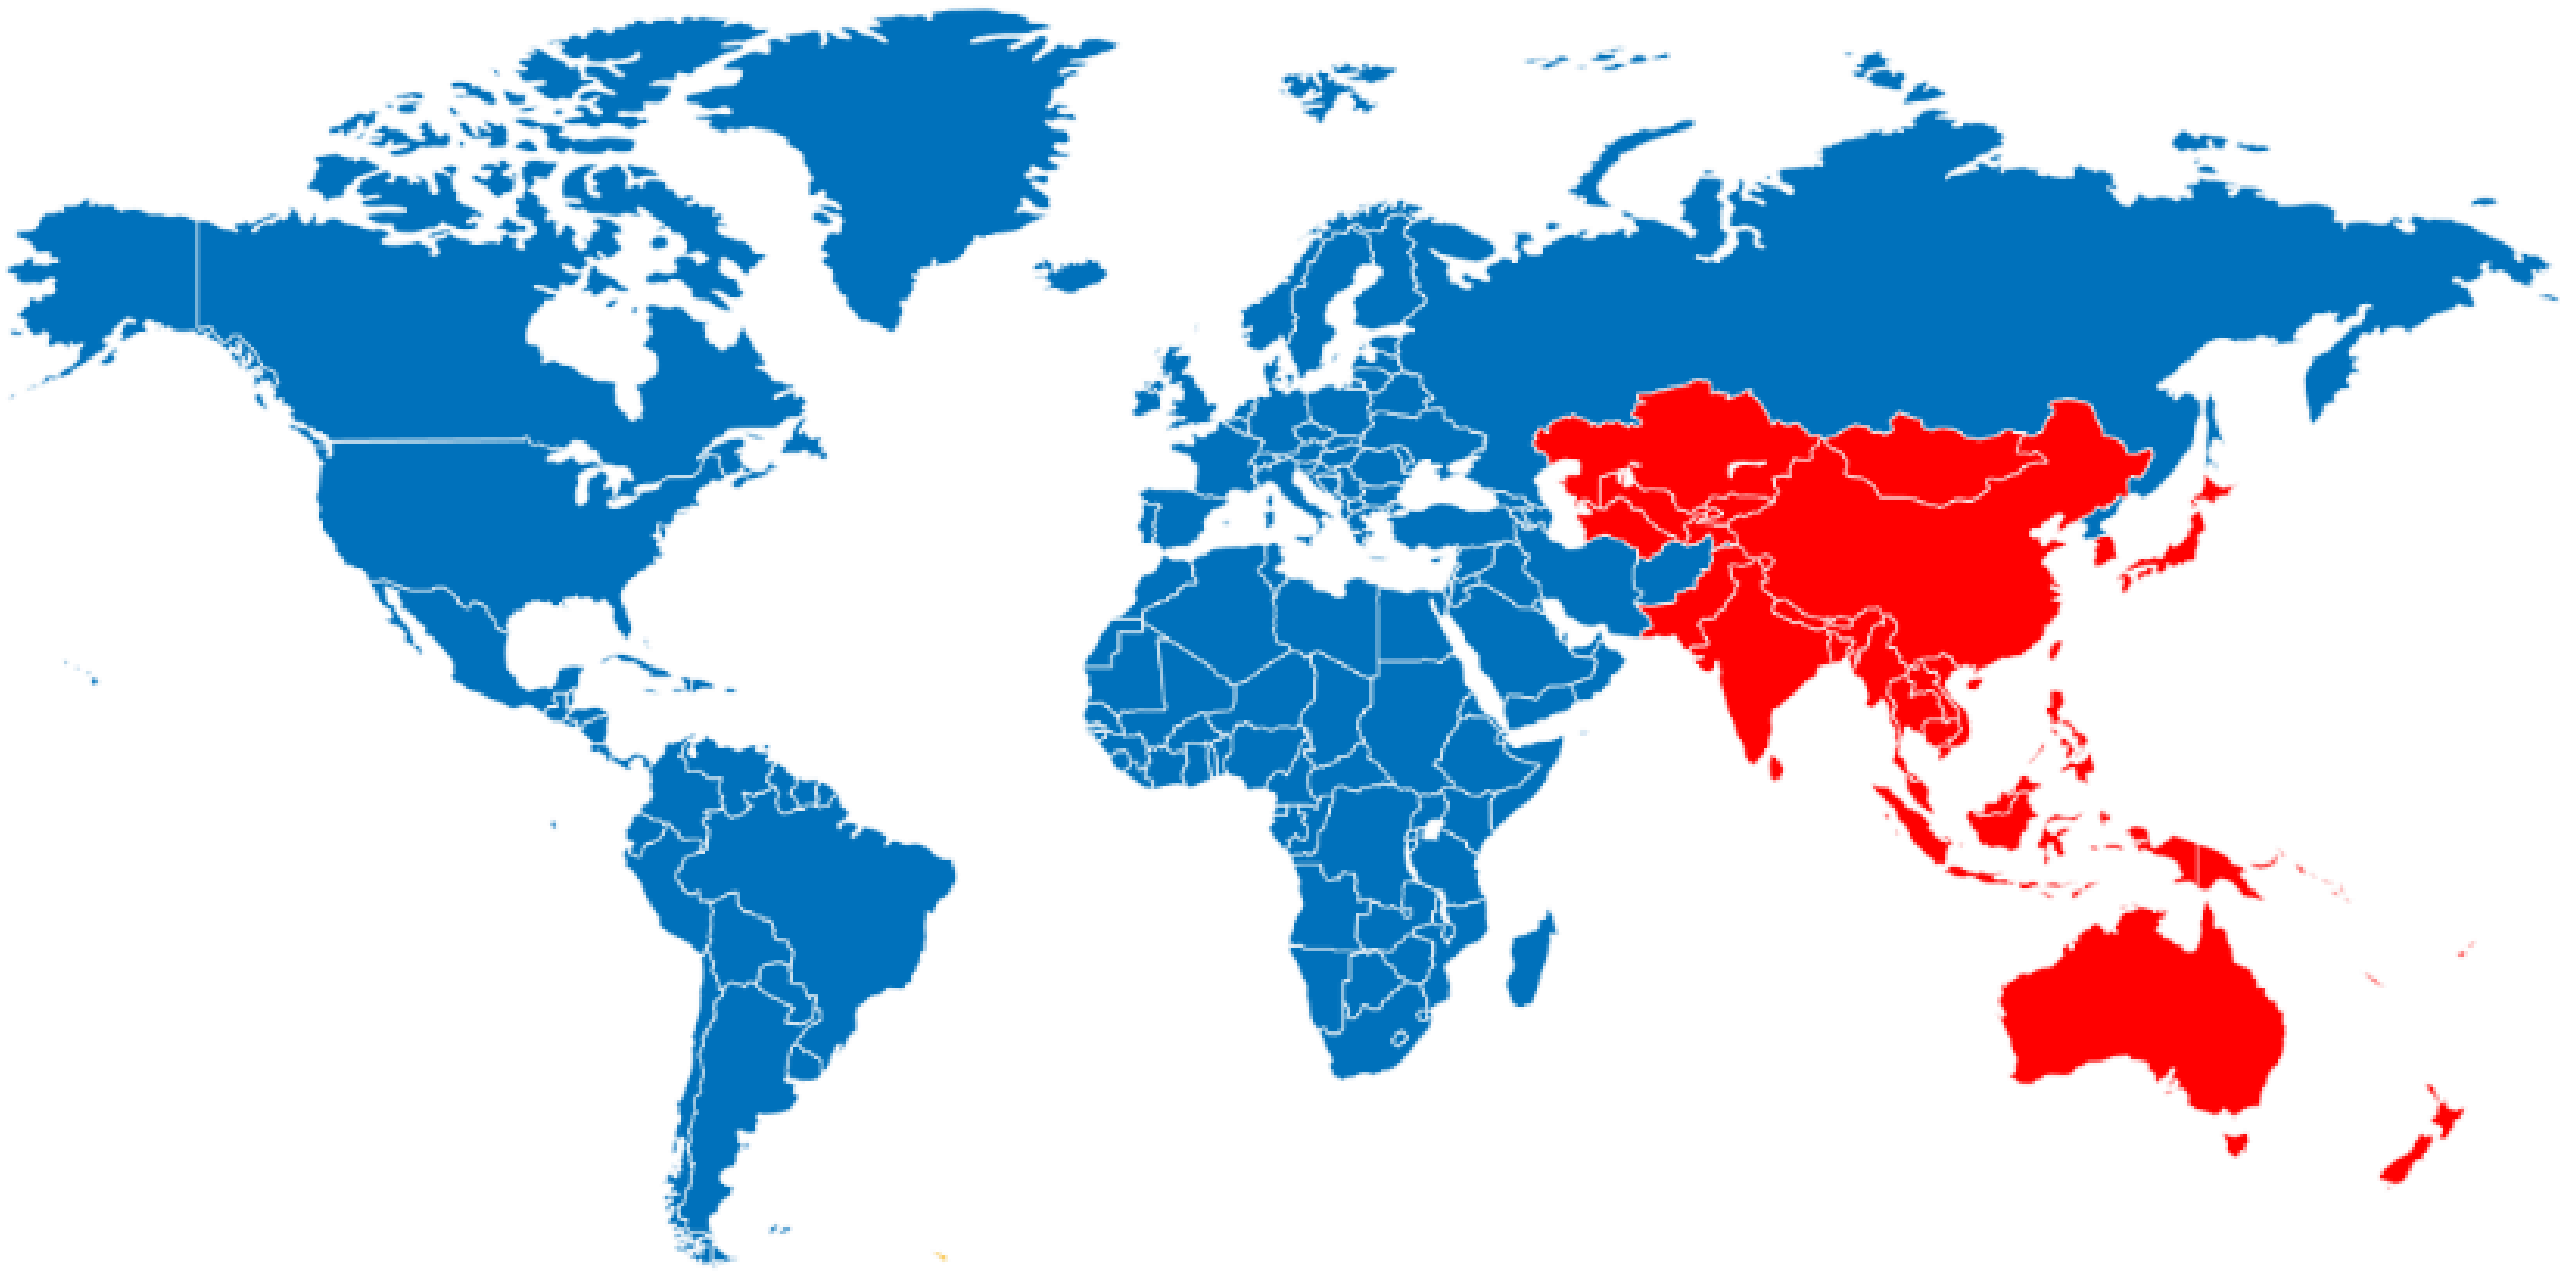

\$35,000 - \$100,000
DIALYSIS AND KIDNEY
TRANSPLANTATION
ANNUAL COSTS
The cost of treating CKD and its complications is unaffordable for governments and individuals in many parts of the world. Annual costs of dialysis and kidney transplantation alone range between US \$35,000 and US \$100,000 per patient⁸.

BETWEEN
2.3-7.1
MILLION
PREMATURE DEATHS FOR
LACK OF ACCESS TO DIALYSIS
AND TRANSPLANTATION
The majority of those deaths occur in countries where resources are insufficient and out of pocket costs are too high⁹.

Asia and Oceania: huge and diverse

China Kidney Disease Network

China Kidney Disease Network (CK-NET) 2015 Annual Data Report

VOLUME 9 | ISSUE 1 | MARCH 2019

www.kisupplements.org

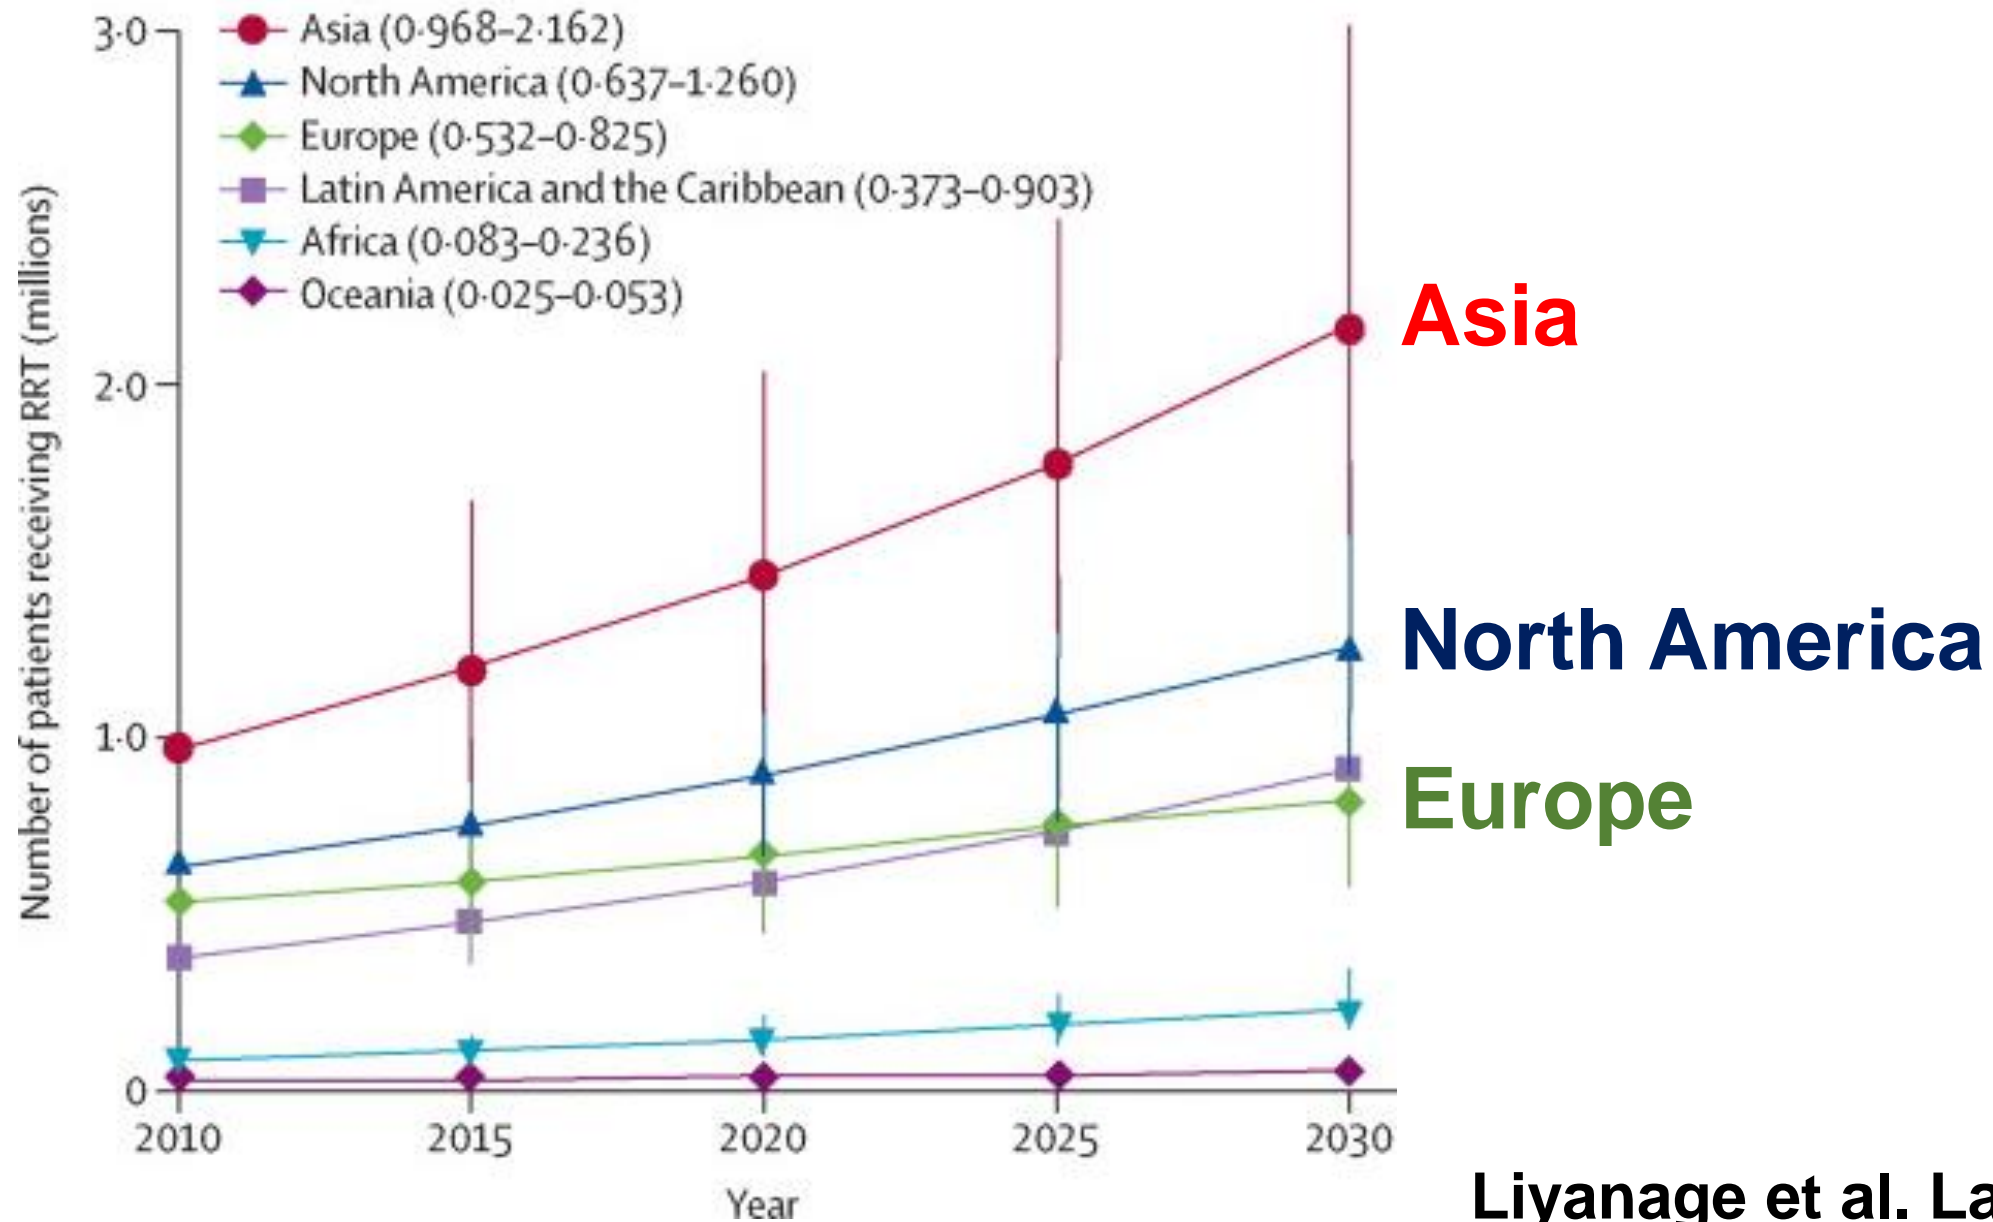

China Kidney Disease Network (CK-NET)

The mean age of prevalent dialysis patients was 55.0 years, which was younger than that reported from the US and Japan (59.1 and 66.6 years, respectively).

For all prevalent dialysis patients, HD was the major modality (90.96%).

The estimated prevalence of HD and PD was 402.18 pmp and 39.95 pmp, and the corresponding number of HD and PD patients was 553,000 and 55,000 in 2015, respectively.

number of patients and prevalence receiving RRT

Accessibility to KRT is low in South Asia and OSEA

less than half of patients with ESKD in 83% and 33% of countries, respectively, are able to access dialysis at the onset of kidney failure

Challenges to access to kidney care in South East Asia and Oceania

Geographies

The geography of the **multiple dispersed islands**, with small populations, **inconsistent supply of clean water**, disruptions due to **natural disasters** (drought, typhoons etc.) and inadequate dialytic fluid disposal systems pose huge challenges in access to and deliver of equitable quality kidney care, compounded by a limited workforce and resources

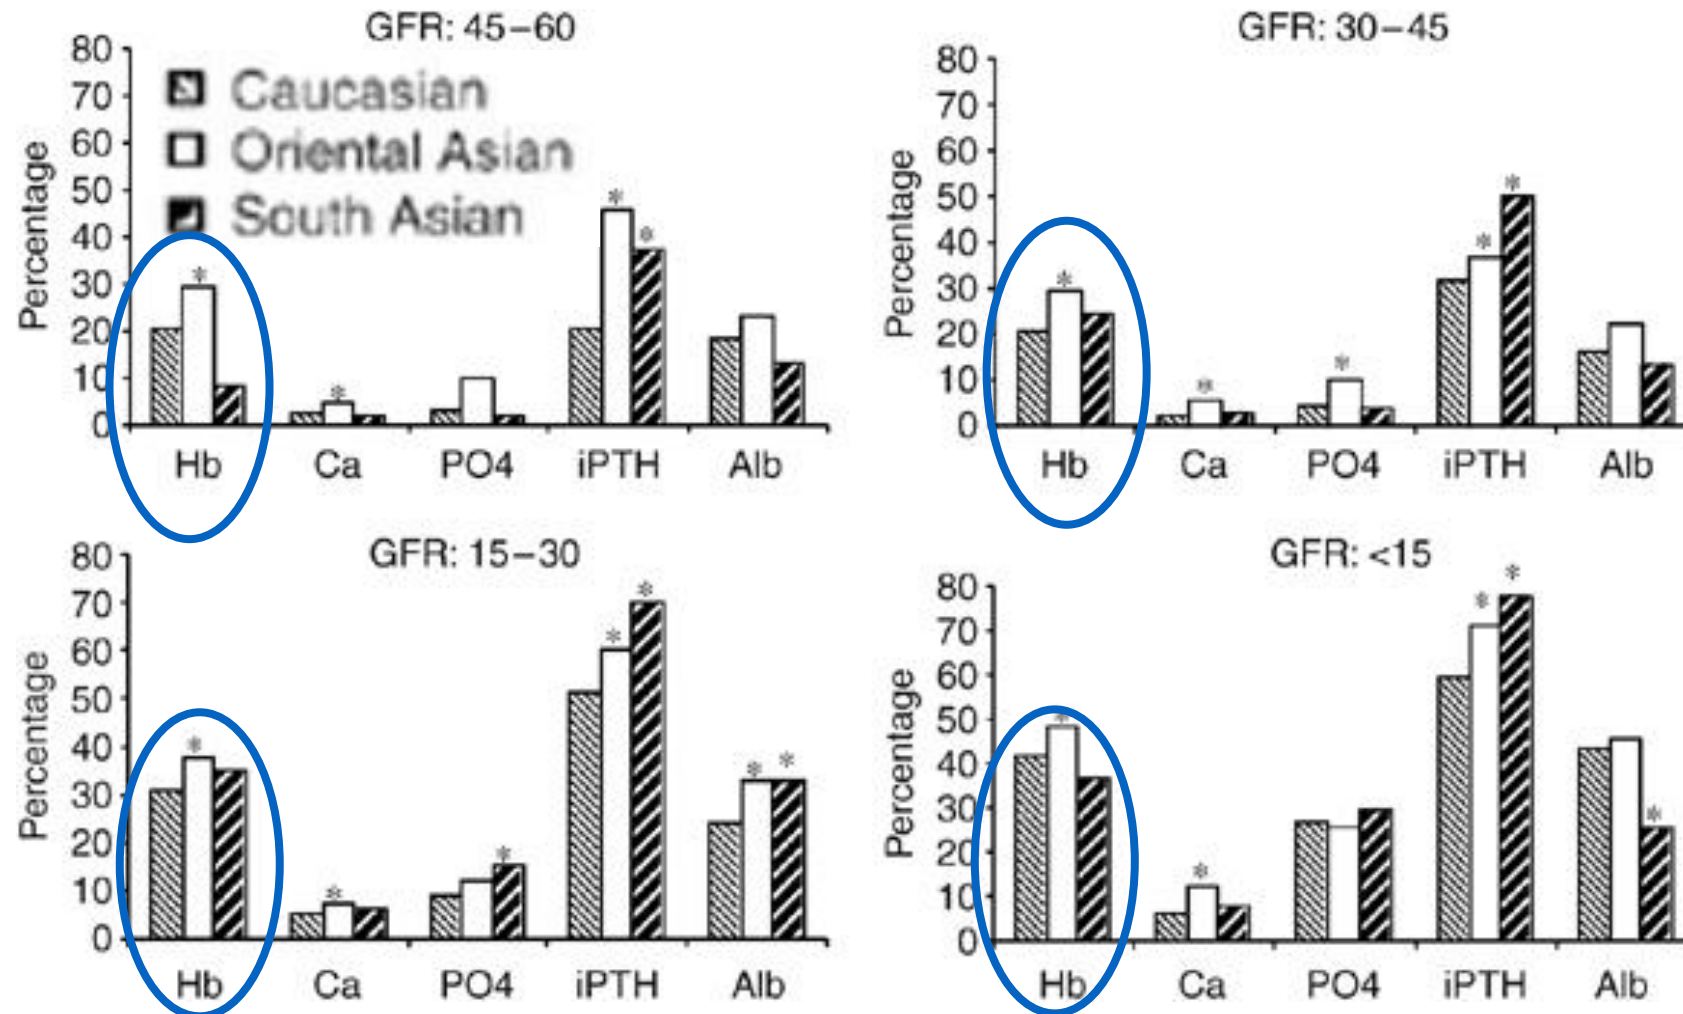

Varying economic structures, cultural and ethnic diversity

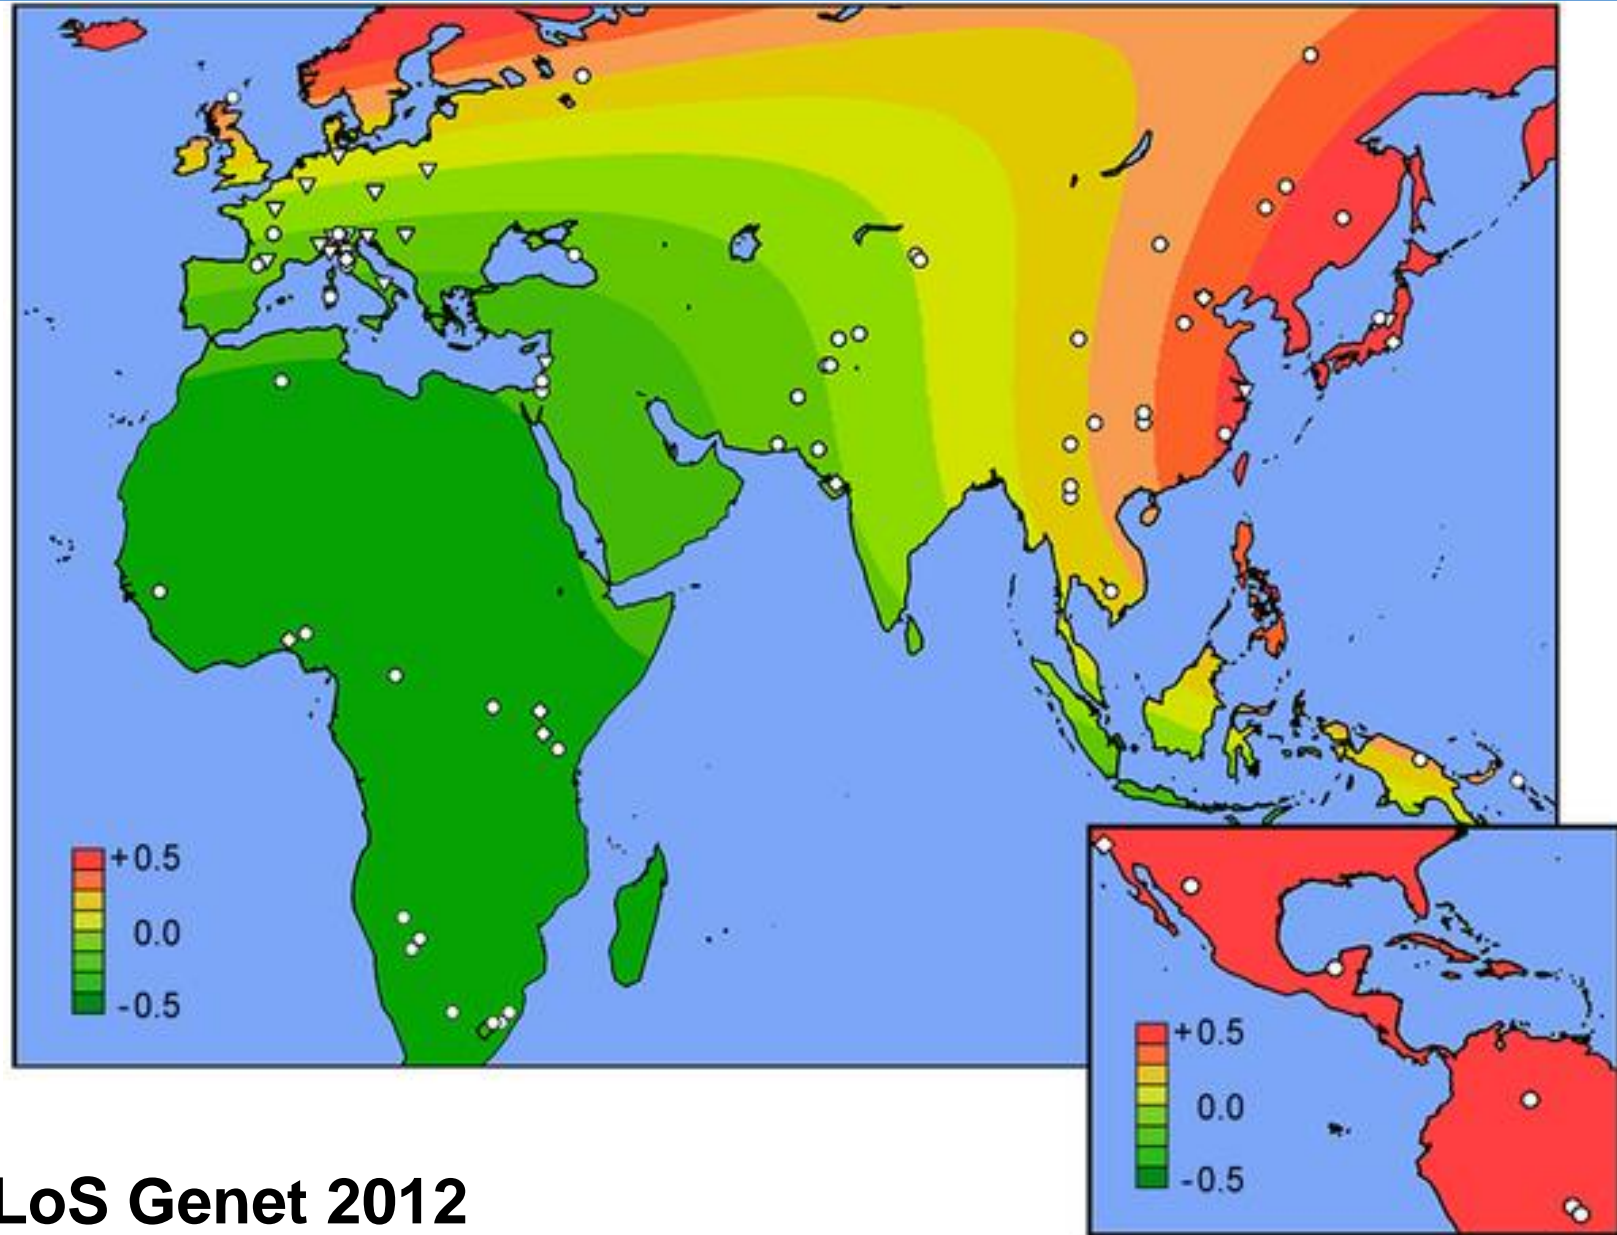

The region encompasses a broad **heterogenous range of countries and incomes**. In the **economically weaker countries**, government does not support funding for dialysis/kidney replacement therapy. Even the more affluent countries have **vulnerable populations** that experience unsurmountable barriers to accessing adequate kidney care, with concerns about ethnic bias.

Oriental Asians tend to develop anemia in CKD

incidence rate of ESKD requiring dialysis

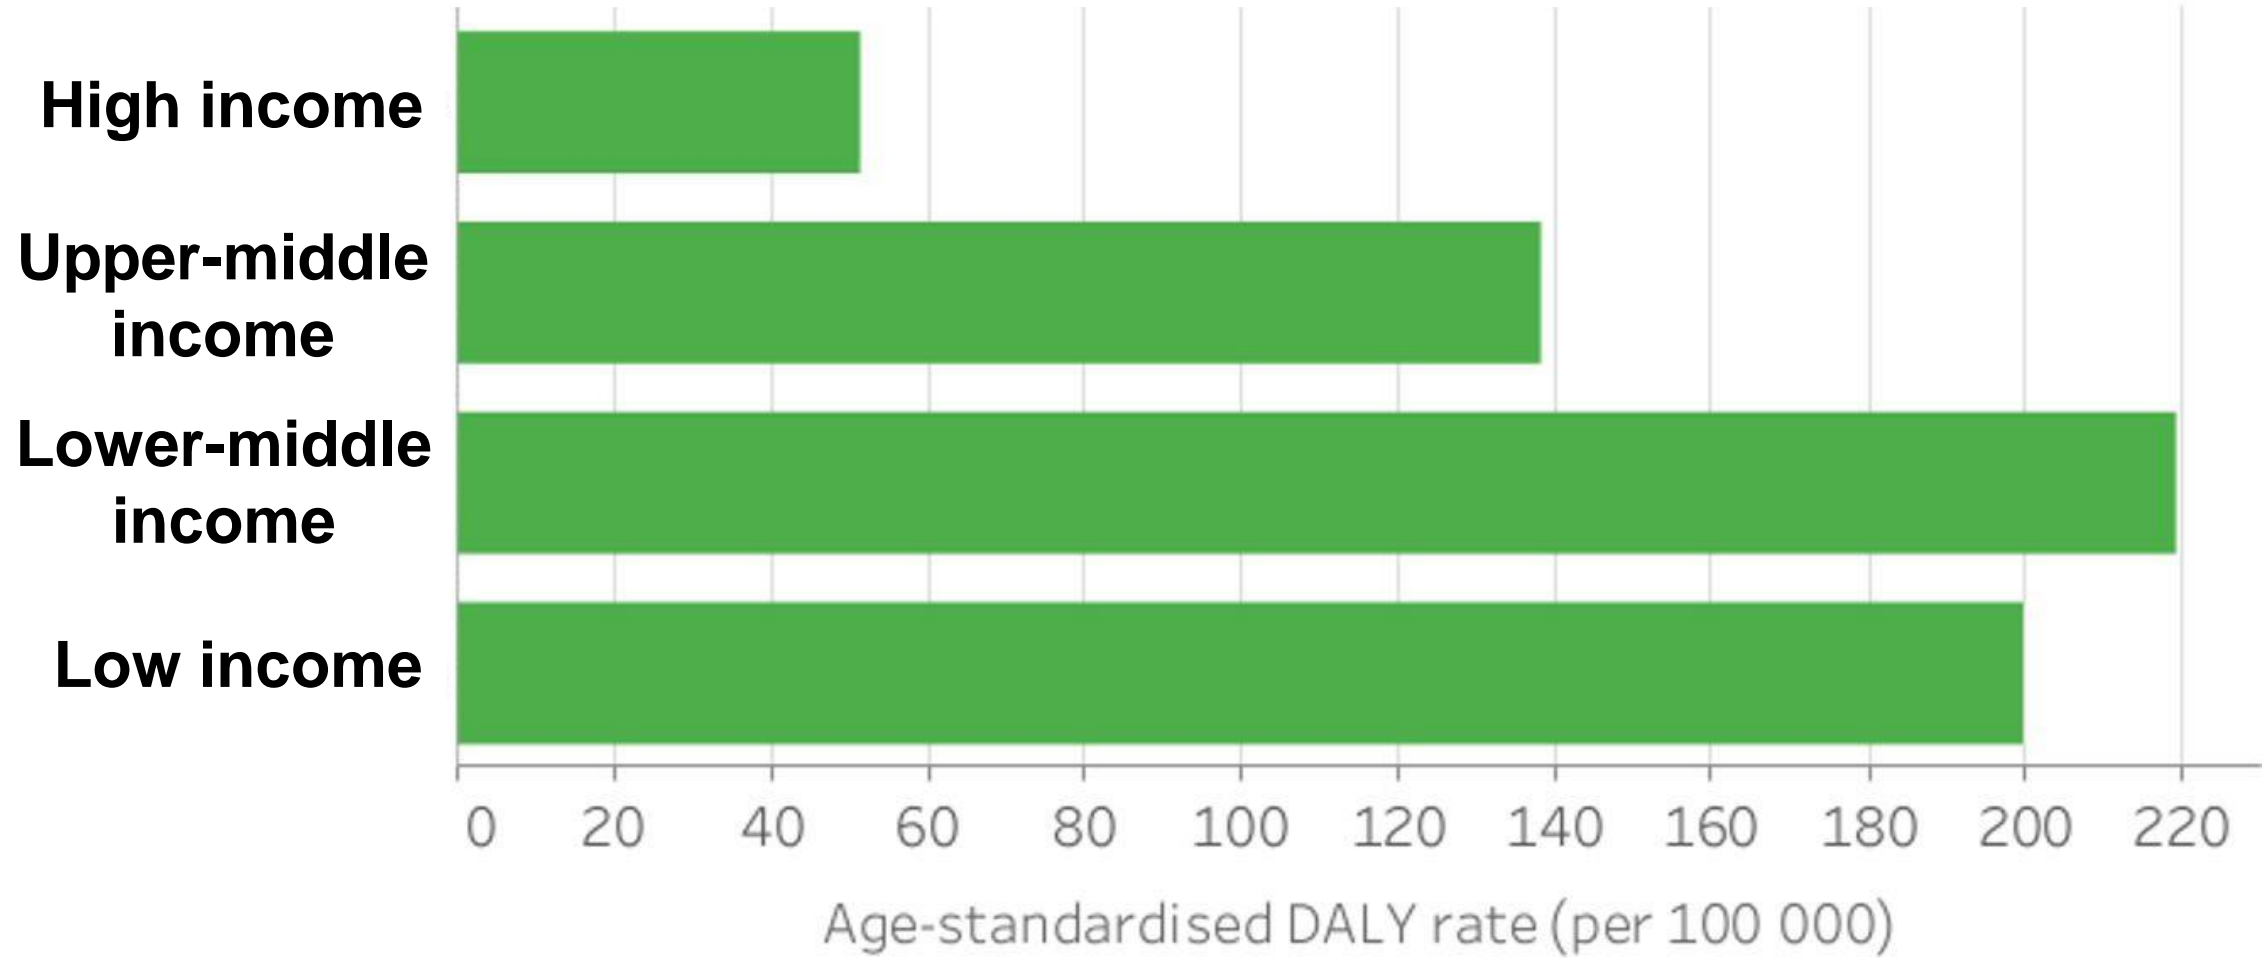

kidney disease attributable to air pollution

Age-standardized “years of life lost” due to incident CKD attributable to PM_{2.5} per 100 000 population

kidney disease attributable to air pollution

PM_{2.5} attributable age-standardised CKD “disability-adjusted life-years” by World Bank income classification

Ensuring access to ESKD care in the Asia Pacific

Increase access to ESKD care

Decrease necessity of ESKD care

Featured strategies of the CKD/ESKD care study cases

Country	Featured Strategy
Prevention of CKD and CKD progression	
Taiwan	Screening of high-risk populations based on risk factor analysis, instituted in general practitioner's offices since 2011 along with reimbursement to patients for pre-ESKD care
Thailand	Use of community nurses and village health volunteers to provide information on lifestyle modifications, and referral of CKD cases during home visits
Integrated CKD/ESKD care	
Japan	Mandated medical check-ups by individual health insurance companies

Featured strategies of the CKD/ESKD care study cases

Country	Featured Strategy
Increasing access to RRT	
China	Increasing home-based PD , including rural areas, along with optimal management.
Malaysia	Funding dialysis through a mix of public, private and NGO financing
South Korea	Promotion of deceased organ transplantation through registries, seminars, research grants, and awards

Yang, Nangaku et al. *manuscript in submission*

Differences in approaches

Country differences in

- **burden of disease**
 - **available human or financial resources**
 - **cultural considerations**
 - **political context**
 - **competing interests from other stakeholders**
- etc.**

Increasing access to integrated ESKD care

ISN's Second Global Kidney Health Summit

March 18-20, 2018, Sharjah, UAE

In LMICs with limited resources, **prioritization of kidney replacement therapy must be balanced against other pressing societal needs** such as sanitation, clean water, prevention and treatment of infectious diseases and and reproductive and pediatric health.

Harris et al. *Kidney Int Supp* 2019

The Asian Pacific Society of Nephrology

Aims

- To promote & encourage the advancement of scientific knowledge & research in all aspects of nephrology.
- To promote the exchange & dissemination of this knowledge in the Asian Pacific region.

Particular focus on fostering the development of high quality nephrology in the less well developed countries of the region.

Asian Pacific Clinical Practice Recommendations

- Working group formed to study gaps in existing clinical practice guidelines from the perspective of the Asian Pacific region
- Particular focus on making relevant to resource limited low- and low- middle income countries in the region
- First Asia Pacific Clinical Practice Recommendation to be released - **“Evaluation and management of diabetic nephropathy”**

APSN Young Nephrologists Committee

- **Purpose:** To be a voice for the young nephrologist's of the region
- **12 members:** from Australia, Bangladesh, Brunei, Cambodia, China, Fiji, Hong Kong, India, Japan, Korea, Taiwan & Thailand
- **'Young Nephrologists' Retreat'** in HK Sep 2018 to allow members to exchange ideas
- **Regular teleconferences** to understand unmet needs of young fellows from different countries.

WHAT DO YOU NEED TO GET, BE AND STAY

HEALTHY?

CAN YOU GET HELP FROM A WELL-TRAINED HEALTH WORKER?

CAN YOU GET TREATMENT THAT HELPS YOU GET BETTER, AND IS SAFE?

CAN YOU GET THE MEDICINES AND OTHER HEALTH PRODUCTS YOU NEED?

WHO WILL PAY FOR IT?

ARE THERE POLICIES IN PLACE TO MAKE QUALITY SERVICES AVAILABLE TO EVERYONE, EVERY TIME?

DOES YOUR GOVERNMENT HAVE THE INFORMATION IT NEEDS TO MAKE THE RIGHT DECISIONS ABOUT THE WHOLE SYSTEM?

THE WORLD HEALTH ORGANIZATION IS WORKING AROUND THE WORLD SO THAT ALL PEOPLE AND COMMUNITIES RECEIVE THE QUALITY SERVICES THEY NEED, AND ARE PROTECTED FROM HEALTH THREATS, WITHOUT SUFFERING FINANCIAL HARDSHIP.

THAT'S WHAT WE CALL

UNIVERSAL HEALTH COVERAGE
